

IMPROVE PERFORMANCE OF BREEDERS

Choose the best source
of Selenium

- The cumulative effects of oxidative stress and related damage contribute to a decline in hatching performance over time
- Selenium plays a part in functions that are crucial to male fertility
- Selisseo® is the only pure form of organic Se, which consistently provides 100% Se as OH-SeMet. With Selisseo®, the Se is stored in the tissues and converted an active form only when needed by the animal to promote its antioxidant status
- Selisseo® improves:
 - the fertility and the hatchability: better fertility, decreased embryonic mortality, maintained optimal semen quality and better hatching parameters
 - the egg composition and the performance of the progeny: enhanced selenium content of eggs leading to a better antioxidant status of progeny
 - the egg production: prolonged egg production in aging flocks

Choose the best source
of vitamins

Microvit®

- Vitamins A (VAs) are key for optimal reproductive performance in birds
- Not all VAs available on the market have the same quality.
- Microvit® Portfolio is a full range of certified vitamins catering to the nutritional needs of the animal feed industry

Improve overall feed
digestibility

Protect animals from
mycotoxins

Improve digestive
performance

Sustain egg production in
aged animals
