

REDUCE FEED COST

Increase overall feed digestibility

Rovabio® is a multi-enzymatic solution which addresses the whole indigestible vegetable fraction of feed and works on any type of diet

Potential savings: 27 €/t of feed <<<

Consider full matrix value of AA

Use recommended energy values of methionine sources in the formulation

>>> Potential savings: 0.34 €/t of feed

Save power during pelleting process

Achieve power savings at pellet mill by using liquid source of methionine such as Rhodimet® AT88 compared to the powder form

Potential savings: 13% of power <<<

Use net energy system

Our online tool to provide animal nutritional recommendations for animals including net energy alongside recommendations on digestible amino acids and minerals: **up to 30% energy saved in poultry diets**

>>> Potential savings: 8 €/t of feed

Use local and alternative raw materials

Better understand nutritional characteristics of local and alternative raw materials available for the feed mill

- The use of alternative ingredients usually enriches the diet in fibers, increasing the substrate for enzymes
- Rovabio® allows to extract the maximum value from the feed

Unike® Plus

Protect animals against the extra risk posed by mycotoxins

Control raw material variability

Our NIR nutritional prediction service that integrates *in vivo* built calibrations for important nutrients such as digestible AA and energy

Our calculation tool that fills the gap existing between analytical results and the formulation program
